To whom it may concern,

Re Conservelec Pty Ltd

In mid 2008, Kador commissioned Conservelec to undertake an appraisal of the internal lighting in the Company's three factories at Sherwood, Sumner Park and Carole Park.

The study was twofold, firstly to provide a higher quality of lighting to continue the Company's health and safety initiatives for its workforce, and secondly to provide an environmentally friendly and cost efficient solution to its lighting requirements.

Conservelec presented a program for removal of existing traditional HID lighting to be replaced by "Hi Brite 6T8-H-Frame" fluorescent fixtures. The payback period for these low wattage lights is estimated to be 18 months from installation.

The installation was completed at the end of 2008. The improved lighting has had a dramatic effect in visibility.

We have been able to eliminate additional spotlights through the factory which traditionally created significant light/shadow contrasts. We now have a factory with uniform high quality lighting that aids production through ability to clearly read drawings and closer inspection of finished product, as well as achieving our primary goal of improved safety through high visibility.

Conservelec have a highly professional team that worked closely with our operational staff to minimize disruption through the installation period.

We would strongly recommend their services to any potential customer.

Regards

Philip Smith
Managing Director
